

Information Provision Policy for Perseus Pilot 2024

This policy provides information for SME users of the 2024 Perseus Pilot, supporting the Scheme permission flow and GDPR compliance. Any queries can be directed to perseus@ib1.org.

Controllers

Within the Perseus ecosystem, the following member roles are considered Controllers under the GDPR where they come into contact with personal data: energy data providers (EDPs), carbon accounting providers (CAPs) and financial service providers (FSPs). Icebreaker One is not considered a Controller. As the Pilot evolves, Controller status will be assessed accordingly with any changes published transparently.

Privacy notices

The privacy notices of individual Perseus members can be sourced via their websites. All Perseus members must publish their privacy policy transparently.

Permitted purposes for data use

Standardised articulations of the permitted purpose(s) for data use are documented in the Registry [here](#). Perseus members should cross reference these materials in any additional information provided to support GDPR compliance on an organisation by organisation basis. Perseus members must not attempt to articulate permitted uses in any different manner to that stated within the licence.

Data retention

For Pilot, Perseus will adopt a temporary set of data retention policies set out in an addendum to the Scheme Agreement. In 2025, the Scheme governance structure will establish longer term policies governing data retention. Perseus members must ensure that the appropriate policy is referenced in GDPR compliance materials.

Pilot data flow

The Perseus data flow for the 2024 Pilot is captured in the diagram below.

Data Flow
